Eyelash & Eyebrow Tinting

Helps to define and frame the face. Patch test required minimum 24 hours prior to tinting treatments.

Improve the appearance of brows and eyelashes with eyelash tints by adding colour to your eyelashes and/or eyebrows.

An eyelash tint is an ideal pre-holiday eye treatment, as it eliminates any worries of avoiding unsightly mascara streaks resulting from dips into the ocean or humid climates. However, both men and women, particularly those with fair hair, can benefit from the enhancement of the general appearance of eyes resulting from this procedure.

The entire procedure is quick and painless, and completely safe, As with other dyeing processes, to ensure that you do not have any sensitivity to the colour, it is advisable that a patch test be given 24 hours in advance of your treatment.

Eyebrows tend to fade quicker than eyelashes. Your colour will generally fade between four to six weeks. Keep in mind that exposure to naturally bleaching elements will reduce the length of time between visits to a salon. To prolong the life of your new look, avoid chlorinated water, and prolonged exposure to the sun.

YumiLash Eyelash Lifting

This new system utilises the latest technology with specially shaped silicone pads instead of fiddly perm rollers and the very latest activation and neutralising solutions to make the application more pleasant for clients. The treatment achieves a lift and shape effect and dramatically opens up the eyes giving the appearance of longer and thicker eyelashes. A YumiLash Lift lasts between 8-12 weeks, the natural cycle of an eyelash.
