.... For your face – Hi Tech Facials

Caci (Microcurrent) Face Lift

Dramatic results can be achieved by re-educating toning and firming the sagging facial muscles, and by softening the appearance of fine lines and wrinkles

CACI is a completely safe & painless treatment, which originally started in the medical field and has over twenty years of medical research. Its success has been such that the press nicknamed it the "Non-Surgical Face Lift".

Whether your concerns are wrinkles, jowls, droopy eyelids or generally an unhealthy appearance, CACI is the treatment to choose.

The beauty of CACI is that it is actually a pleasant relaxing facial treatment, combined with skin products to rejuvenate your skin. So lay back on the couch while the CACI machine does the hard work!

A course of 10 initial treatments is required followed by maintenance facials to prolong the results.

Caci Hydratone

The Caci Hydratone is a brand new treatment specifically developed to provide immediate and intensive skin hydration and face firming. After just one hydratone treatment the face has a remarkably softer, radiant and a more youthful appearance!

Excellent as a single treatment or as a course of treatments for progressive results. The hydratone treatment also works spectacularly when combined with the Caci lifting technique or microdermabrasion.

Microdermabrasion

Our Bio-Brasion treatment diminishes lines and wrinkles achieving a smooth, radiant and glowing skin ready to absorb cosmetic formulations more effectively.

A gentle and relaxing exfoliation treatment which removes dead skin cells, oils and other debris, eliminating blocked pores and comedones.

During the Bio-Brasion treatment a fine stream of crystals is gently propelled over the skin's surface. At the same time, exfoliated skin and used crystals are hygienically vacuumed away into disposable accessories, revealing rejuvenated and renewed skin.

Bio-Brasion microdermabrasion can safely and effectively be used for the following concerns:

- Fine lines and wrinkles
- Expression ageing
- Sun damaged skin
- Pigmentation
- Acne management

IPL Photo-rejuvenation Skin Treatments

IPL Technology improves the appearance of photoaged skin, removes age spots (sun-induced freckles), most benign brown pigments, redness caused by broken capillaries and gives the skin a smoother, more even tone through a process called

Photorejuvenation for face and body. IPL Skin Treatments help restore a more youthful appearance with minimal downtime.

Photo-rejuvenation treatments will also stimulate the production of collagen. Many clients find that their skin feels firmer, smoother and looks clearer after a course of treatments.

What can IPL treat?

- Flat, benign pigmented lesions (freckles, sunspots and general pigmentation)
- Facial vascular lesions (spider veins, red spots and broken capillaries)
- Diffuse redness, rosacea and red scarring
- Poikiloderma (redness, pigmentation and a spotty look to the neck and/or décolletage). Uneven skin colouring
- Sun damage

Treatment of benign pigmented lesions generally requires 1-3 treatments performed approximately every 7-28 days or once all the darkened cells have sloughed off. A 70-90% reduction of pigmentation can be expected. Recommended skin care and strict sun protection will help to maintain the results for much longer. Visible improvements are seen with each treatment.
